

Neural Networks Overview

The foundation of modern AI

KEY TAKEAWAY

Neural networks power many AI breakthroughs

Hidden Layer

What is a Neural Network?

A brain-inspired computational model

Neural networks consist of layers of interconnected nodes.

Key Statistics

Scale and performance of modern networks

170 billion

Parameters in GPT-4

Total trainable weights, illustrating model scale

45 terabytes

Training data size

Text data processed to train large language models

88 %

ImageNet top-1 accuracy

State-of-the-art vision models surpass human-level performance

How Neural Networks Learn

Training, validation, inference
