Agricultural Production Process

From preparation to harvest

1

Prepare

Farmers prepare land and organize resources.

2

Plant

Seeds are planted at the appropriate time.

3

Grow

Crops receive water, nutrients and care.

4

Harvest

Mature crops are collected from the field.

5

Distribute

Products move through markets and supply chains.

Key Takeaway

Agriculture remains an important part of Bangladesh's development.

A productive and resilient agricultural sector is important for Bangladesh's future.
